

↑ PENTA JUNIOR

Lightweight, comfortable and fully ventilated helmet for the smallest climbers. For its comfort and lightweight construction it is ideal for sport climbing, mountaineering and on via ferrata.

DESCRIPTION

Designed for child users with a small head circumference (48–54 cm).

Recessed clips for attaching any head lamp on the market.

Thanks to its low profile, the helmet does not get in the way when climbing and fits neatly on the head.

With a weight of 185 g, your child will not know he/she is wearing a helmet.

The soft, wide chin strap ensures maximum comfort and its length allows a scarf or hat to be worn under the helmet.

Compact top protects children from falling objects, yet maintains a low profile.

Hard PC shell protects against sharp objects, while PS foam absorbs the impact force.

The large vent area guarantees excellent ventilation even on the hottest summer days.

Comfortable and easy size adjustment system with straps that do not squeeze even after a full day of wear.
