

All-round lightweight twelve-point crampons for classic mountaineering. Designed for all terrain from glacier tours to steep snow slopes or classic ice couloirs.

DESCRIPTION

Asymmetrical shape of crampons ideally adapts to the boot and the front points thus providing maximum efficiency in a steep terrain.

Fastening system suitable for rigid mountaineering boots with a groove or welt on the heel.

BOUNCER anti-snow plates included.

Frame is made of hardened chromoly steel.

Patented stainless steel Rock&Lock buckle enables fast and easy fastening and releasing the webbing.

Toolfree size adjustment.

Lowered teeth profile provides better stability while keeps traction.

COMPARISON

FAKIRIII vs. FAKIRII

- modified shape for lower weight and improve fatigue strength performance
- 20 g lighter
- new length adjustment system (standard system)
- snow BOUNCERS made of softer plastics for better efficiency and lifetime, rivets used instead of screws

MAINTENANCE

Lifetime of this product is not strictly limited by the manufacturer. Depending on the condition of the product and its history it may be necessary to retire it immediately.

no grinding

ware of salt
